

How PayMee automated over 14k monthly reconciliations and structured its operation to scale

With Simetrik, the Brazilian fintech centralized data from multiple financial institutions, strengthened regulatory governance, and reduced execution time to 62 seconds per cycle.

PayMee is a Brazilian fintech specialized in digital payments infrastructure, connecting companies and platforms to the financial system through APIs and modern integrations. With the accelerated growth in transaction volume and the expansion of its client base, the company needed to strengthen its reconciliation, monitoring, and governance processes within an environment regulated by the Central Bank of Brazil.

With Simetrik, PayMee automated more than 14 thousand monthly reconciliations, centralized data from multiple financial institutions into a single environment, and structured recurring operational routines — achieving greater efficiency, traceability, and a solid foundation to sustain growth with regulatory compliance.

Before Simetrik	After Simetrik
✗ Fragmented data across multiple sources and systems, making consolidation and the generation of reliable reports difficult.	✓ Centralized data within a single environment, providing an integrated view of inflows and outflows across multiple financial institutions.
✗ Manual consolidation and analysis processes, with file downloads and data matching tasks consuming hours from the operations team.	✓ Automated and chained reconciliations, with transaction pre-classification and a significant reduction in manual effort.
✗ Limited traceability and difficulty preparing for audits and Central Bank regulatory inspections.	✓ Complete historical records and structured data, facilitating audits, regulatory inspections, and ensuring compliance.
✗ Complexity in reconciling different data structures, requiring additional effort to consolidate and validate information.	✓ Structured control over payment flows, including PIX operations, with organized reporting routines for the Central Bank.
✗ Limited operational visibility and constraints in report generation for decision-making.	✓ Integrated dashboards and reports that expand analytical capabilities and support high transaction volumes.

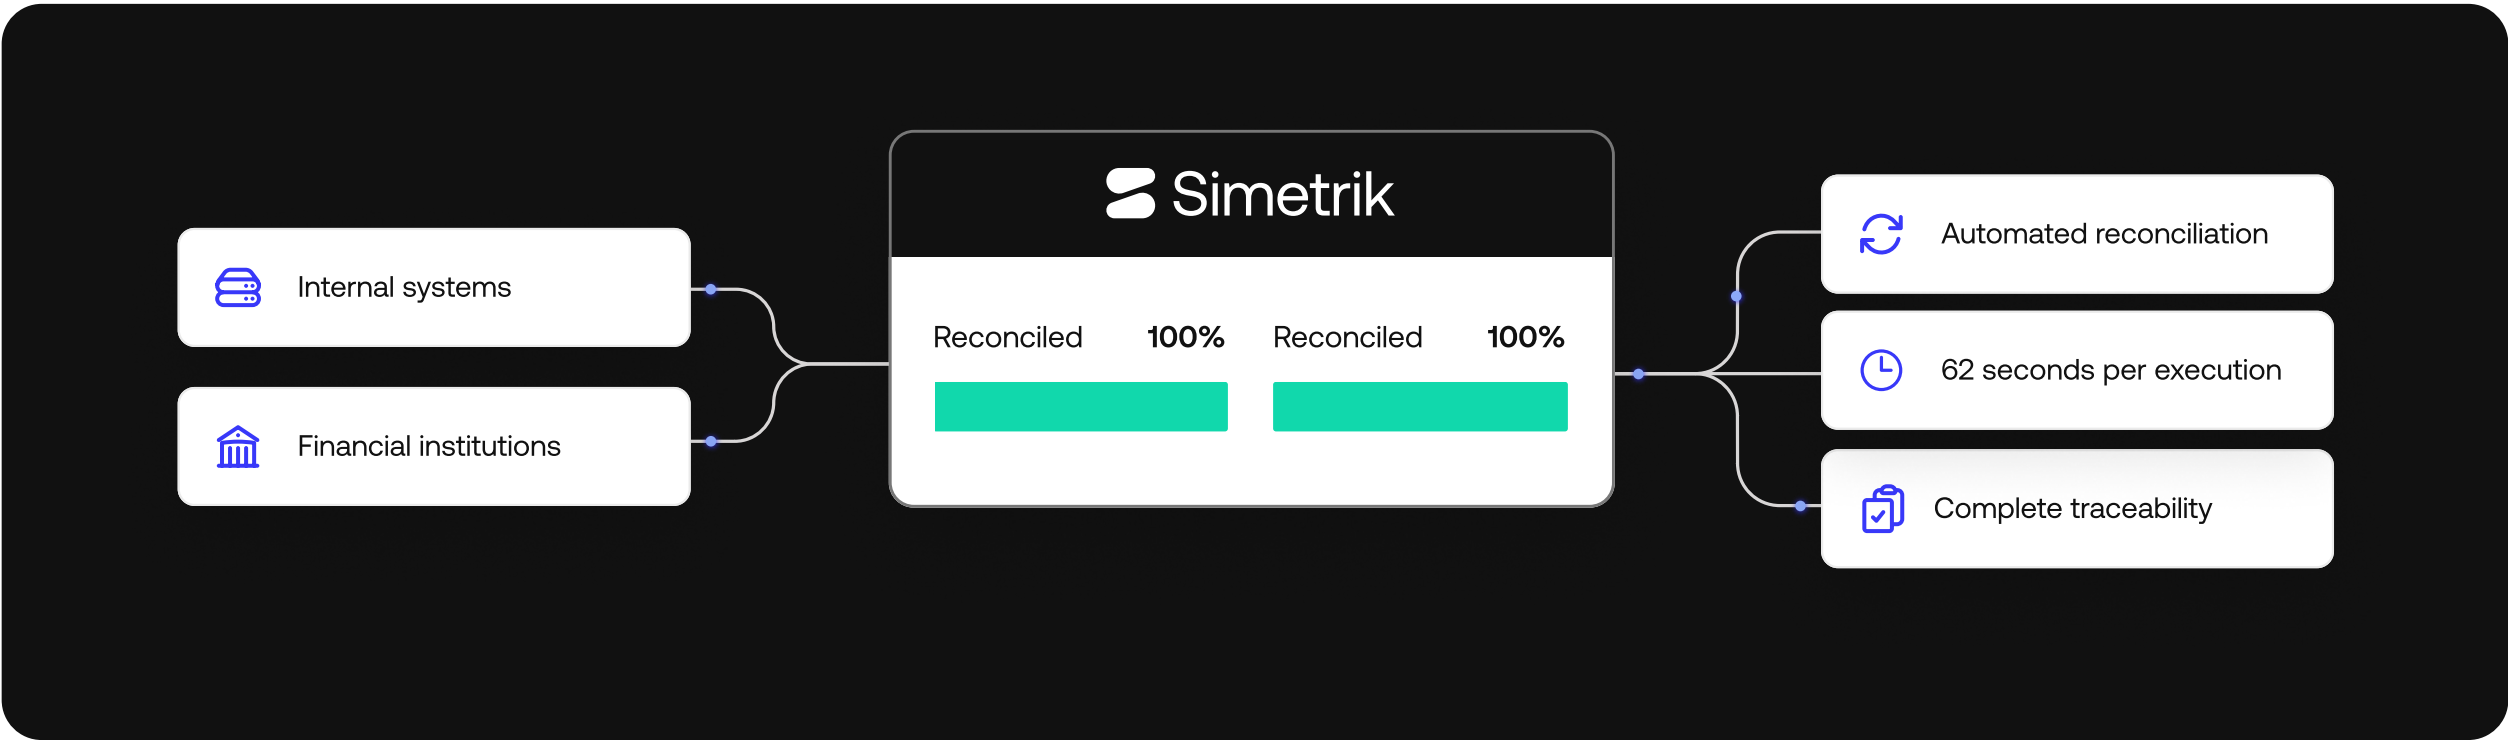

The challenge

With the accelerated growth of its operations, PayMee faced significant challenges in managing and controlling its financial processes:

↗ Rapid growth in transaction volume The continuous increase in transactions required more robust validation and reconciliation processes to ensure the consistency of financial data.	↔ Complexity in data reconciliation The need to cross-check and validate data across different structures and sources within the company increased the complexity and risk of financial controls.
⌘ Data fragmentation and limited integrations Financial information distributed across multiple systems and file-based integrations made consolidation and reporting more difficult.	🏛️ Highly regulated environment As part of the ecosystem supervised by the Central Bank of Brazil, the company needed to maintain high standards of control and traceability.
👤 Dependence on manual processes Data consolidation, expense categorization, and report generation still required significant manual effort, consuming the team’s operational time.	

The solution with Simetrik

With more than 300 thousand transactions processed daily and increasing requirements from the Central Bank of Brazil, PayMee needed a platform capable of keeping pace with its growth without compromising financial control. With Simetrik, PayMee automated 434 reconciliation workflows, structured its regulatory governance, and gained real-time operational visibility.

Cash In

Automated transactional reconciliation
Automatic reconciliation of more than 300 thousand daily transactions — PIX, payment slips, and digital payments — matching internal data against statements from multiple financial institutions, with real-time discrepancy detection.

Accounting Operations

Operational and accounting integrity
Centralization of 100% of relevant sources — banks, acquirers, and internal systems — into a single environment, ensuring consistency between operations and accounting records with complete traceability.

Cash Out

Payout and settlement control
Validation of processed payment flows, including PIX operations, ensuring that every outgoing fund movement matches the original transactions and that settled amounts are accurate.

Reporting & Regulations

Regulatory compliance and accountability
Structured routines designed to meet the requirements of the Central Bank of Brazil, with complete historical records, auditable data, and automated reporting that ensures compliance and facilitates audits.

Key benefits

- ✓ Automated transactional reconciliation

More than 14 thousand monthly reconciliations automated across 434 active workflows, processing over 300 thousand transactions per day with consistency.
- ✓ Centralized financial data

100% of relevant sources connected within a single environment, eliminating fragmentation and manual cross-checking between systems.
- ✓ Operational agility

Each reconciliation run is completed in an average of 62 seconds, with 33 daily cycles ensuring continuous monitoring.
- ✓ Strengthened regulatory governance

Structured routines for accountability to the Central Bank, with complete traceability and auditable data.
- ✓ Secure scalability

Operations prepared to grow in volume and onboard new clients while maintaining consistency and compliance.
- ✓ Expanded analytical capabilities

Centralized data enabling the cross-referencing of multiple sources, generation of strategic reports, and support for decision-making with reliable information.

“Our partnership with Simetrik elevated PayMee’s level of control and efficiency, transforming complex reconciliations into automated, traceable, and scalable processes. With greater visibility into our financial flows, we gained operational speed and strengthened the governance needed to grow securely.”
